### **FALL 2017**

As we continue to expand our services we are finding that many of the custom laboratory support requests we receive and the technical expertise & platforms we offer have broad application to not just pathogen detection but to other areas of science. In addition, we hope to provide a link to other core services available at the California National Primate Research Center. Thus we have a new name!

### **Primate Assay Laboratory**

Please visit the PAL website for further details

<http://www.cnprc.ucdavis.edu/primate-assay-laboratory-core/>

The rest of our contact information is unchanged. If you don't see the assay or service you need on our menu please don't hesitate to contact us- we may be able to set up something on a custom basis.

We are currently validating TB assays to supplement tuberculin skin testing TST. We are also evaluating Digital Droplet PCR for custom work. Please contact us if you are interested in discussing either of these. We will be announcing more details in future newsletters.

Just a reminder about the upcoming holidays- please do not send samples from Nov 21 to 28 and Dec 20 to Jan 1 without contacting us ahead so we can be proactive since shipping and receiving can be problematic during holidays.

As always, we thank you for choosing us to provide laboratory support for your work.  
We aim for the highest quality and value your trust.
