April 2021

It's Spring! That mean's baby season back in the corrals. We've been busy here at the CNPRC. Things are getting closer to normal with more staff on site and new research projects starting- we're not there yet, but we're closer. Our testing operations are running smoothly with only occasionally supply chain issues. Please contact us if you have any testing questions. We are working on getting our request form updated soon, we hope.

We and the other members of the NIH National Primate Research Centers are continuing to monitor our animals for SARS-CoV-2. No spontaneous infection has been detected. We have also completed a study of various commercially available and laboratory developed assays and are pleased that they all performed well. You can read the summary here:

https://www.nprcresearch.org/primate/pathogen-detection/PDWG%20Webpage%20Update%20March%202021_SAH.pdf

We also need to give you a heads up that the University's annual rate review is in progress. We are expecting only minimal changes but the review ensures that we are recovering actual costs. Typically, the revisions are effective in May each year.
